What's New In AutoCAD?

Macros and shortcuts: Create macros to simplify your workflow by allowing you to run commands and functions as a single step or multiple steps. Add multiple shortcuts to a single function to save time, such as the rotate and rotate tool shortcut, which can be used to rotate the same object multiple times. (video: 5:06 min.) More general modeling tools: Create lines, circles, arcs, and bezier curves to connect or span objects, as well as create duplicates of objects that you don't want to delete. (video: 3:29 min.) More precise snap options: Select the "sensitivity" of the snap options and adjust the snapping behavior with the Snap distance option and the Corners option, or have AutoCAD recalculate the position of snaps as you move objects. (video: 5:16 min.) Powerful graphics: Generate 3D wireframes from any drawing or model, and apply them to new objects for a realistic visualization of your design. (video: 1:56 min.) Real-time updating: Update your drawings in real time, allowing you to see changes in your design while you work. (video: 1:25 min.) Mobile and tablet support: Take your design to the next level on a mobile device or tablet with the latest version of AutoCAD. (video: 4:04 min.) Showcase – Updated Power and Precision Sketch: Quickly create a sketch on the spot with a solid or dashed line, polyline, or circle. Use a slider to adjust the sketch's diameter and color. You can even see the outline of the pencil on the paper and adjust the line's thickness and hardness. (video: 3:19 min.) Advanced: Connect and span objects with Bezier curves or lines Create line segments or bezier curves, as well as an arc or circle that spans multiple connected objects, and use the angle snapping feature to keep the angle consistent or perfectly round. This feature is especially useful when designing architectural plans or parts of mechanical designs. (video: 1:24 min.) Bezier: With the Bezier command, you can use a single arrow button to convert an object into a bezier curve, and then easily modify the path to create smooth curves or circles. Points: The point
