a proprietary text file format which contains information about the text such as font type, font face, font size, font colour, font background, font spacing etc. Model creation AutoCAD models are the 3D graphical representations of geometrical and topological entities which are drawn in the 2D drafting space. They consist of a set of graphic primitives which are organised in families. The object of AutoCAD is to design a model by creating lines, arcs and surfaces of the 3D entities which represent the objects in the real world. A line is a graphical object used to represent a real line or vector. An arc is a graphical object used to represent a continuous curve. A surface is a graphical object used to represent a plane or surface. Arc and surface may be used interchangeably. Any two points of a line, arc or surface can be connected by a segment. Lines can be used to create geometric forms such as rectangles, trapezoids, rhomboids, cylinders and cones. Arcs can be used to create circular or elliptical shapes or curved shapes which are created using circular arcs. Surfaces can be used to create any shape which can be defined as the intersection of two other surfaces. These are the building blocks for models. Any geometric entity can be defined by the placement of a number of line segments connected to form a geometric shape. Lines, arcs, surfaces and compound objects are called graphic primitives or graphical entities. These graphic primitives are defined and stored in a computer database. These can be brought together to make a model. A model of a building consists of a set of graphic primitives which are described by parameters such as line style and length, thickness of lines, size of arcs, thickness of arcs, height of surfaces, fill colour and texture. The parameters can be modified to change the appearance and behaviour of the model. AutoCAD's ObjectARX API can be used to create custom models of objects in AutoCAD. Drawing creation The process of creating a drawing is called authoring. The format of the drawing is a DXF file. A drawing is made up of text, blocks, layers, symbols, groups, drawings and dimensions. A block is a set of graphical entities which are arranged in a particular way to represent the contents of the block. AutoCAD authoring software has a number of user interfaces for creating drawings. These include the following: Drafting Tablet Windows Graphing Interface Workbench a1d647c40b
