µBook [April-2022]

Keymacro is a powerful keyboard command and macro recorder. With the help of it, you can quickly record any hotkeys, hotstrings, shortcuts, or auto-repeat actions that you set up in your computer. As you can see in the video, it is possible to set up actions for different windows, text files, web browsers, emails and more. For example, you can configure it to open a folder, a file, a browser, etc. You can also control any software, either with hotkeys or with a macro. For example, you can repeat your most commonly used operations when using a specific application. Keymacro is highly customizable. For example, you can set up key combinations for different actions, such as "CTRL + Q" or "ALT + Z". You can also use the keyboard to set up a full set of macros, so that you can perform multiple tasks with a single key combination. Furthermore, the program is equipped with an interactive interface, so that you can play back the recorded keystrokes to the screen and even see the previous actions that you have created. Keymacro is a very simple to use program. There is a main window, which contains the whole interface and all the control options. All you need to do is to record the action that you want to perform, hit a key combination to execute the action and then double click the action so that you can see the results. The program has two main components: a recorder and a results interface. The recorder can record any keystrokes, hotstrings, hotkeys, auto-repeat, mouse click, or click on a window. The interface is equipped with a list of the recorded actions that you can browse and edit. KEYMACRO can record hotkeys for multiple applications, while you can define a different action for each of them. You can configure the application that you want to set the hotkeys for and the key combinations that you want to use. You can also set up shortcuts or hotstrings for text files and open them using hotkeys. The results can be edited by double clicking the actions that you want to change. KEYMACRO is able to support multiple actions simultaneously. You can define one action to open a file or go to a URL using a hotkey and another action to load a different browser and open it using hotkeys.
