Automatic data exchange (ADX) AutoCAD supports data exchange with other CAD systems and legacy CAD systems. In AutoCAD 2016, two different ways of data exchange were made possible: the Direct Data Exchange (DDE) protocol to connect to other versions of AutoCAD and the AutoCAD Exchange Server (AES) software that enables the remote access to a legacy CAD data base. AutoCAD's DXF format and Standard Views are also used for communicating with other CAD systems and create metadata that is defined by the related standards. The formats and protocols supported by AutoCAD are listed below. Standards Standards are established by standards organizations for sharing, preserving, and publishing information. CAD standards are used for developing, maintaining, and enhancing CAD products. CAD standards encompass specific document and information types, such as the Portable Document Format (PDF) for producing documents, as well as the various file formats used for storing information and data in a CAD file. CAD standards were developed for various applications. The following CAD standards are supported by AutoCAD. Autodesk Exchange Apps: Autodesk Exchange Apps are third-party add-on applications or plugins available from the Autodesk Exchange Apps website. They are developed as commercial add-on products, which can be used in conjunction with AutoCAD and AutoCAD LT to extend the capabilities of AutoCAD. When creating new products, one needs to identify the functions that are not covered by the standard AutoCAD add-on, and the methods required to make those functions available. CAD Files A CAD file is a collection of drawings that are in vector graphics format. The drawings in the CAD file have a common standard coordinate system. CAD files can be stored on physical or virtual storage media, and are generally created using software tools for design and drafting, and are available in proprietary or open source file formats. There are a large number of CAD file formats that are used by different CAD software products. AutoCAD's DXF file format is a popular open standard CAD format for creating and exchanging technical data. DXF is the file format used for storing the CAD data in a CAD file. AutoCAD DXF file format is used for creating CAD files that contain information in the form of blocks. AutoCAD supports exporting CAD files to Adobe PDF, a widely used file format for electronic document distribution. C 5b5f913d15

You can add content from printed paper or PDFs directly into the drawing to keep your drawings updated and up-to-date. Layers and Linetypes: Linetypes can now be edited on a layer-by-layer basis. Modify and re-draw lines with any shape, gradient, color, linetype, or any other options. Change the linetype of individual lines or modify all lines at once with the new Edit Linetypes feature. Two new editing options let you change the linetypes of individual or multiple lines. (video: 1:20 min.) Layers can now be moved, scaled, or repositioned on the drawing canvas. You can also remove individual layers. The AutoLISP (Linetypes Inlay Style Language) Editor tool gives you direct access to the LISP language used to create linetypes. The LISP editor helps you insert and modify LISP commands, with syntax highlighting and other tools to make it easy to write, edit, and debug your linetypes. The Linetype Styles panel lets you preview and select existing linetypes from a list of styles, or apply a single or group of styles to your current linetypes. The Linetype Properties panel helps you display, edit, and save linetypes. You can change the color of individual lines and change the linetype of multiple lines at once with the new Linetype Properties panel. Linetype Groups can now be named, with a separate collection for each group. New utilities to increase your efficiency with linetypes. Start and Stop: Make more of your drawing time by using the new Start/Stop tools. Easily start or stop your drawing at specific locations, in time-saving user or pause modes.
