Free Download K53 Learner's Licence Study Guide In PDF and. Freely available in pdf format and multiple choice test format.. South Africa study notes and practice tests for the learner's licence by South African. Updated Booking forms in five languages, from the South African Road Traffic .Q:

Why is this Regex not working? I'm using this Regex to validate values:

~^[1-9]+(\,[1-9]{1})?\|s?[1-9]+\$~ However, it is not returning anything for any value. I've been testing this using online regex tests like this one, and it is not working properly: Can someone please help me? Thank you. A: It seems that you have made many mistakes. You need to use anchors: ~^(?:[1-9]+(\,[1-9]{1})?)\|s?[1-9]+\$~ See the regex demo. The ^, \$ and (?:...) constructs are special meta-characters used to denote the start/end of the line (line anchors) and the beginning/end of a "full line", respectively. Also, the \|s? can be replaced with \|s. Inside a character class, the + quantifier means "one or more symbols", and not "one or more occurrences of the previous quantifier" as usually assumed. However, inside a range quantifier, it denotes the minimum and maximum symbols that appear in the range. In this case, [1-9]+(\,[1-9]{1})? means "one or more digits followed with a comma and zero or one more digits". If you want to allow just one or two digits, replace the {1} quantifier with {2}. If you want to allow up to 7 digits, replace the {1} quantifier with {7}. the way it started off.' He immediately took cover behind the counter. 'Free man,' the hunter said. 'I must say, I like the way you handled yourselves in there. Even your amazing flanking maneuvers were just what I needed to entice me into this deal.' 'Well,' the hunter said

Question: This book can be downloaded on the computer, but.Q: How do I create a node field for each year? I am creating a content type (let's call it "project") with custom fields for each year. The custom field is supposed to store the location in California for each year, so each project should have one for each year. I've created a content type and added custom text fields to it. The field type for this custom field is 'Multiple'. I've started a project, and I'm using some template files, so I don't have any code yet. When I create the project, I want to add new fields for each year and not have to go through a lot of code. After a little research I've discovered that I can create custom fields (by code) that include each year in the name (like "year-2015"). Then I could use a loop to add the fields to each node. Do I have any other option? A: You can use the Field Collection module. It lets you create fields for groups of content types. (for example, check out the

field collection module on drupal.org) You'd create a field collection and add a custom field to it, for the year. Then you'd add a field collection item for the project as well. The project field collection item should be under the project node. You can then use the field collection to build a view on project fields for the years. A: If you can't use the field collection module (see @seb
