Here is the sample of the result, you can notice those softwares are not there, but they still can be cracked. it happens all the time. of course, you can choose the tools you want to crack it and crack them as many as you want, so the probability you get cracked one is not that small. is there anyone know what tool to use to crack the softwares like above? A: The way most cracked software / games / patches are patched is through either an online exploit or through the /bin file that's used for testing the crack. In your case the thing you want to check out is /bin/PFC. For example: \$ strings /bin/PFC | grep agilent afiletat. ndonwalle 2.2.2.04..nli.agilent.som. 2011..agilent..agilent..agilent. agilent.agilent.agilent..agilent.agilent.agilent. 2.2.0.4.agilent. agilent.ags com.agilent..agilent. 11.55. 2011..agilent..agilent. pftmwr.agilent..agilent. 11.2.2012.agilent..agilent..agilent. That's just for PFC from what I can tell. The strings command is like a reverse grep that can only find the exact string in the strings. If I had to guess it would be something along the lines of a C or C++ application and the target code is in /bin/PFC. This is because hackers typically target vulnerabilities in their own code and leave the file untouched, and what's happening is it's using /bin/PFC to search for specific code. I don't think you can simply download / crack software as you do with a cracked DVD or Game. You would have to track a cracker which would be a hassle. I did once run across a software that was cracked that had a key which was used by the cracker as the software could be cracked without a crack key. A: The software is not cracked, they simply are not using a license key and thus can't be used. The only difference to normal software
