 number. Q: Inverse limit of fibrant complexes I  
 want to prove the following proposition: Let  
 $C$  and  $D$  be fibrant complexes of sets  
 (that is, simplicial sets that satisfy the  
 condition that the functor  
 $F: \Delta \rightarrow \mathcal{S}$  of  
 simplicial sets to sets is a fibration). Suppose  
 that  $f: C \rightarrow D$  is a map that is the  
 transition map of a weak equivalence  
 $g: C \rightarrow C$  (that is, if we apply the  
 functor  $F$  to the map  $g$ , we get an  
 isomorphism). Then the map  $f$  is also the  
 transition map of a weak equivalence. I have  
 been able to prove it when  $C=D$ , but I am  
 not even sure how to start with a general  
 case. I was advised to use the following  
 definition: a diagram of weak equivalences  
 $g_i: K_i \rightarrow K_i$  between fibrant  
 complexes of sets is said to be a fibration if it  
 satisfies the following condition: if we apply to  
 it the functor  $F: K \rightarrow \mathcal{S}$   
 of simplicial sets to sets,
