Q: How to modify a virtual attribute in a controller action? I have a method like this in my controller: `def add @item = Item.where(:user_id => params[:user_id]).first if @item.nil? flash.now[:notice] = 'Item was not found for this user' redirect_to :back else @item.save end end` Now I need to add a virtual attribute to my Item model like so: `before_create :name_of_virtual_attribute` How do I modify my method to allow `name_of_virtual_attribute` to be there as I save? A: The Rails docs state: You can set the virtual attribute in the initialize method. This would mean that if you modify `Item.rb` to look like this: `class Item`

Q: Scraping data from a website using python The objective is to scrape data from a website using python. I am fairly new to python and I was searching on the internet and I found out that from `urllib.request import urlopen from bs4 import BeautifulSoup` how to use = "Enter Website url" `website_url = urlopen(how_to_use) html_page = website_url.read` c6a93da74d
